

Individuals with SCA1, SCA2, SCA3, SCA6, SCA8 NEEDED

Adults with SCA1, SCA2, SCA3, SCA6, and SCA8 are needed to participate in a research study of cerebellar function (JHM IRB NA_00034854). Testing will involve a 90-minute MRI of the brain, neurological testing, and cognitive testing.

MRI scan of the brain

Neurological exam

Thinking and mood testing

The cerebellum is an integral part of the brain that controls balance, coordination, and eye movements among other vital functions. However, many questions about its structure and function in cerebellar syndromes remain unanswered.

Through our studies, we hope to gain a better understanding of the normal functions of the cerebellum as well as its contribution to ataxia.

Your participation in this research will help build our understanding of ataxia and cerebellar function. Thank you for the gift of your time.

Subjects will be paid \$25 for MRI scan and \$25 for cognitive testing.

Contact Ann Fishman (Research Coordinator) 410-502-5816 or email ataxiaresearch@jhu.edu for more information

Principal Investigator: **Chiadi Onyike, M.D.**
